EPIC 1 AND RESPECTIVE STORIES

Medicine Dispensing & FEFO

selected, edit epic color

✓

Description

Manage medicine dispensing using FEFO logic to ensure valid batches with the nearest expiry are selected first, while allowing authorized overrides with proper justification and audit records.

Since I had already completed 2 sprints before I realised that I had to take screenshots of the backlogs, I have taken screenshots of the description of the EPICS

▼ Description

As a Pharmacy Clerk,

I want the system to select the valid medicine batch with the earliest expiry date, so that older stock is dispensed first and medicine wastage is reduced.

ACTIVE SPRINT BOARD

The screenshot displays the Jira Active Sprints board for the 'PERODE board' within the 'Pharmacy Expiry & Re-order Dispatch Engine' space. The interface is in dark mode. The left sidebar shows navigation options: 'For you', 'Recent', 'Starred', 'Apps', 'Plans', 'Spaces', and 'Recent' items including 'Pharmacy E...' and 'PERODE board'. The main content area features a top navigation bar with 'Summary', 'List', 'Active sprints' (selected), 'Backlog', 'Development', 'Forms', 'Timeline', 'Docs', and 'Reports'. Below this, there's a 'Complete sprint' button and a 'Group: Story' dropdown. The board is organized into four columns: 'TO DO 1', 'IN PROGRESS 1', 'IN REVIEW 1', and 'DONE 2'. Each column contains a task card with a title, a progress bar, and a checkbox. The 'TO DO' column has 'Confirm Stock Delivery' with a progress bar and a checkbox for 'PERODE-11'. The 'IN PROGRESS' column has 'Acknowledge Purchase Order' with a progress bar and a checkbox for 'PERODE-10'. The 'IN REVIEW' column has 'Generate Purchase Order' with a progress bar and a checkbox for 'PERODE-9'. The 'DONE' column is empty. A '+ Create' button is visible at the bottom of the 'TO DO' column.

BURNDOWN CHART

REFLECTION QUESTIONS

1. Did your estimations reflect the actual effort?

Yes, to a reasonable extent. The Fibonacci story points gave a useful relative estimate of the effort required for each user story. The more complex stories, such as applying FEFO logic and generating purchase orders, were assigned higher points, while simpler tasks such as

acknowledging purchase orders were given fewer points. The sprint results showed that the estimates were generally reasonable.

2. Was your backlog well-prioritized?

Yes. The backlog was prioritized according to user impact and importance to the pharmacy system. Core functionality such as FEFO picking and medicine dispensing was given higher priority, while supporting functions such as stock delivery confirmation were given lower priority. This helped ensure that the most important functionality was addressed first.

3. How did your simulated sprint align with your plan?

The simulated sprints generally aligned with the plan. The higher-priority and core medicine-dispensing functionality was included in the earlier sprint, while the remaining inventory and supplier-management features were handled in the following sprint. This allowed the work to be organized into manageable groups based on priority and estimated effort.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed how quickly the team was completing the planned story points during the sprint. It provided a visual indication of the team's progress and remaining workload. It also helped identify whether the team was progressing at a steady rate and gave an indication of how much work the team could realistically complete within a sprint.
